SMELL: SMELL AND TASTE ENQUIRY

BIG QUESTION: Does smell influence our tasting?

The **SMELL** of a food can change the **FLAVOUR** of a food

Try eating a piece of cheese while holding your nose.

How would you describe the **TASTE** of the cheddar cheese with your nose held?

Take a second cube of cheese but this time you will be smelling the mystery smell that your teacher will give you.

How would you describe the flavour of the cheddar cheese now?

You can try other investigations, for example eating a piece of apple while smelling a lemon. How does this affect the flavour?

Can you identify different fruit flavours while smelling peppermint?
